

Case study: Pina Petroli SA

With many years of experience, Pina Petroli SA is now a constant presence in Ticino economy. The development that the company knew from 1949, year of its foundation, is quite visible in the dimension of the depot of Grancia, with fifteen great tanks, twelve vehicles and thirty employees. These technical and human resources make Pina Petroli a leader in the area, profit in heating oil distribution in whole Ticino and Grigioni southern valley. Everyday Pina Petroli carries out hundred of deliveries, satisfying the customers needs and their details.

Since always Pina Petroli looks with trust at the new technologies. For this reason Pina Petroli chose AntOptima to develop new technologies in order to optimize transportations and to serve the customer with always greater efficiency and precision.

DyvOil is the software application for the management and optimisation of heating oil distribution which allows to:

- optimise the use of the fleet of vehicles;
- forecast the customers' consumption and reduce the costs of distribution;
- improve the efficiency (less miles, less time, more deliveries);
- increase customer satisfaction, thanks to real time management of urgent deliveries.

Thanks to the use of DyvOil, Pina Petroli improved the efficiency of its own fleet of about 20% with 3 minutes of computational time, necessary to plan daily the whole fleet.
